We evaluate the revenue and distributional effects of a one-time capital levy on personal net wealth that is currently on the political agenda in Germany. We use survey data from the German Socio-Economic Panel (SOEP) and estimate the net wealth distribution at the very top, based on publicly-available information about very rich Germans.

A Wealth Tax on the Rich to Bring Down Public Debt

The interpretation that results from these findings is the following: the politically motivated struggle about the capital levy increased the interest rates in 1925 but were not as such important enough to forbid a stabilization which was still possible and expected even before Poincaré took over.
