Most students taking a course in linear algebra will have completed courses in differential and integral calculus, and maybe also multivariate calculus, and will typically be second-year students in university. This level of mathematical maturity is expected, however there is little or no requirement to know calculus itself to use this book successfully.

This course is a sequel to the introductory probability course Math471, the basis of which has been the book “The Essentials of Probability” by R. Durrett (quoted as [D] henceforth). Some statistical topics are

already introduced there. We start by discussing some sections and examples (essentially reproducing, sometimes extending the text of [D]).
