**A First Course**

Developed from a first-year graduate course in algebraic topology, this text is an informal introduction to some of the main ideas of contemporary homotopy and cohomology theory. The materials are structured around four core areas: de Rham theory, the Čech-de Rham complex, spectral sequences, and characteristic classes.

This was first suggested independently by Corrsin (1951) and by Oboukhov (1949). Recent measurements give 0.5 approximately. If we substitute  $-5/3$   $2/3$  into the estimate for  $T_e$  given in (8.6.11), we (8.6.14) and  $E(K) = K$  find that the spectral transfer of temperature variance in the inertial-convective subrange is constant, as it should be.
