Teaching Geometry According to the Common Core Standards

Basic Constructions The basic constructions are: 1. Transfer a segment. 2. Bisect a line segment. 3. Construct a perpendicular to a line at a point on the line. 4. Construct a perpendicular to a line from a point not on the line. 5. Construct an angle bisector. 6. Copy an angle. 7. Construct a parallel to a line through a given point. 8.

Pythagoras Theorem and Its Applications

To show that we constructed such a triangle, notice that in our construction, we made the hypotenuse equal + and constructed a circle with the hypotenuse being the diameter. By Thales' Theorem, any point on the circle connected to the endpoints of the diameter forms a right angle, thus constructing a right triangle satisfying the properties.
