For each study, curators add information about animal species, exposures, health effects, location, and whether the study includes data providing evidence linking animal sentinel events to human health risk. You can browse the database by year, journal, author, exposure, risk factor, species, outcome, or by methodology.

Animal Science and Wildlife Biology - UC Davis

Wildlife biologists and zoologists study animals, both within facilities and in the wild. They determine origin and examine behavior, diseases, genetics, and life processes of animals. Some may specialize in wildlife research and management, collecting data to determine environmental impacts of land and water use on habitats.
