Threat modeling is a process by which potential threats, such as structural vulnerabilities can be identified, enumerated, and prioritized " all from a hypothetical attacker's point of view. The purpose of threat modeling is to provide defenders with a systematic analysis of the probable attacker's profile, the most likely attack vectors, and the assets most desired by an attacker.

The JRC's monitoring of agriculture using remote sensing started in 1988, initially designed to apply emerging space technologies for providing independent and timely information on crop areas and yields.

Monitoring Agricultural Resources (MARS - European

Airspace Design requires sophisticated modelling and simulation tools to refine and validate airspace design proposals. It carries out operational analysis of airspace structure (route network and sectorisation) combined with various traffic distribution options in support of the Network Operations planning activities.

Progress varies between regions; many countries have limited or non-existent water quality monitoring systems, while others lack quality

74-Mateo-Sagasta-Improving water quality is an opportunity

Detail. Stakeholders rightly expect companies to deliver resilient water and wastewater services both now and in the longer term. We explained in "Resilience in the Round"™ that companies should not just focus on the resilience of their assets and processes, but also consider their corporate and financial resilience.
