Software maintenance in software engineering is the modification of a software product after delivery to correct faults, to improve performance or other attributes.. A common perception of maintenance is that it merely involves fixing defects. However, one study indicated that over 80% of maintenance effort is used for non-corrective actions. This perception is perpetuated by users submitting ...

Single instruction, multiple data (SIMD) is a class of parallel computers in Flynn's taxonomy. It describes computers with multiple processing elements that perform the same operation on multiple data points simultaneously. Such machines exploit data level parallelism, but not concurrency: there are simultaneous (parallel) computations, but only a single process (instruction) at a given moment.

A Geant 4 application is defined by the use of an instance of the G4RunManager class or of a user-defined class derived from it. This class defines the main interaction with the user: it provides interfaces to define the user initializations (e.g. geometry and physics definitions) and the user actions that permit interaction with the simulation kernel and retrieve output information.
