The HL-60 cell line is a human leukemia cell line that has been used for laboratory research on blood cell formation and physiology. HL-60 proliferates continuously in suspension culture in nutrient and antibiotic chemicals. The doubling time is about 36–48 hours. The cell line was derived from a 36-year-old woman who was originally reported to have acute promyelocytic leukemia at the MD ...

Arsenic is a chemical element with symbol As and atomic number 33. Arsenic occurs in many minerals, usually in combination with sulfur and metals, but also as a pure elemental crystal. Arsenic is a metalloid. It has various allotropes, but only the gray form, which has a metallic appearance, is important to industry.. The primary use of arsenic is in alloys of lead (for example, in car batteries ...

A Modern Threat? Dioxins are not merely a modern industrial phenomenon. Chlorinated organic compounds are produced naturally, by biological and abiotic means, have been found in coal samples dating back 300 million years, and are produced by cyanobacteria, which have existed for billions of years. a There are 4,519 known naturally occurring organohalogens, 2,320 of which are organochlorines.
